This tutorial is part of a series of Adobe Photoshop tutorials for graphic designers. You can also check out other Photoshop tutorials This tutorial will teach you how to edit individual pixels, create new images, remove unwanted elements and make adjustments to photos. We'll start off by looking at a sample image of a desert landscape. This tutorial will use this same image to teach you to use both the Touch Up Brush Tool and the Clone Stamp Tool. Note: Since this tutorial is for Photoshop, the tools that we use will be Photoshop related. If you are using Photoshop Elements, here's a tutorial for how to use the similar tools. Step 1: Setting the Stage Image 1. A Sample Desert Landscape In this Photoshop tutorial we will work on a natural

desert landscape. This image will help us to learn about pixel manipulation and editing, plus the different tools that can be used to create an image. Select the image as a Smart Object in Photoshop. Using the Rectangular Select Tool (M) or the Rectangle Selection tool, select the areas that you would like to work on. We'll be working on the foreground as well as the background of this image.

### Step 2: Using Pixel Manipulation Tools

Pixel manipulation is the process of editing individual pixels in an image to modify brightness, contrast and color. Each pixel is made up of three colors: Red Green Blue

When we edit the pixels in an image, we are working on the color data of the pixels. The image that we have selected is in RGB (Red, Green, Blue) mode. If we wanted to get rid of red color, we would select the R channel of the image and use the Red (Hue) Adjustment layer to change the color. Although this tool can be used for editing individual color channels, to create new and unique images we may want to work with more than one color in an image. This

type of editing can be done with the eyedropper tool. In step two, we will use the tools that are located in the toolbar. As we learned in previous tutorial, these tools will become more clear as we continue to work in Photoshop. Here's a quick refresher on the tools we will use in this Photoshop tutorial: Set (Image 1. Effective leadership in a global economy: context, content and the changing nature of leadership. In a globalising world, leaders must change, adapt and evolve. However, much of the literature on leadership reflects an era of industrialism and a smaller, simpler, more socially homogeneous 'ruling class'. This paper outlines the elements that matter to the 'world' of global leadership. Emerging and future leaders must have a global perspective, practice a global mind-set, and understand, adapt and communicate clearly in a global context. They must learn from global examples and models, develop global standards and externalise the role of leadership. The paper discusses globalisation, its adverse effects on leadership and the new leaders that are arising from it.

Q: What type of part is this? I am trying to find out what type of "piece" this is. This part is on a very neat looking aluminum coil box.

A: It is called a "wayback", a

---

V-belt type tensioner which is used to keep tension on a V-belt. This particular one is made by Takata, which is a Japanese company. A tensioner is basically a spring and some sort of linkage and arm on the pulley to keep the belt tight. The wayback is spring loaded, so if you remove the load on the spring it will fly off your system. I'm not sure if these are stitched on or welded in place, but I suspect the later since it doesn't look like the metal itself would be capable of welded. This invention relates generally to endoscopic surgical procedures, and more particularly to a system and method for converting an endoscopic surgical procedure into an open surgical procedure. In open surgery, a large opening in a patient is required to allow access by the surgeon to the surgical site. This is generally a large opening, e.g. 8-12 inches in diameter and is typically referred to as a large incision or a large thoracotomy. In endoscopic surgery, access to a surgical site is obtained by inserting an endoscope (a tube with a viewing lens) into the body, e.g. into a blood vessel.

---

Typically, an endoscope is less than 5 mm in diameter and is inserted into the body through a relatively small incision, e.g. 3-5 mm in diameter, which is too small to allow access by conventional surgical instruments. Thus, endoscopic procedures require that the internal organs of

**Hairstyle of the Week: Summer Summer's Do: Soft and Curly with a Shiny Finish** Summer's do: Soft and curly with a shiny finish This is a great haircut for summer. It is a low pouf hair style, cut on the sides and back with the front being shaved and then it is curled with a little bit of a shine. Before trimming, try to open the ends of the curls to make them stand up. During the next step, you can gently brush the hair to remove any edges that are not in the shape you want. If you feel like that there are not any issues, then leave it as it is. You can actually leave the hair long, cut it shorter at the neck, and

brush to create that undone look. To ensure that the curls stay in shape, apply some hair styling gel to the ends of the hair. After it gets dry, comb the hair using a wide tooth brush. For this style, I used my Loreal Smooth Curl and Shine Sun Tamer. Once it is all set, spray a few pins and the ends are set. Make sure that you spray a lot on the ends so that the hair dries faster and the hair stays straight. The do was cut at Archos Salon in Miami, FL. What do you think? Do you like this hairstyle? Style it: Summer looks fabulous as a low pouf! It gives a youthful look, but allows her to keep her elegant. Before trimming, try to open the ends of the curls to make them stand up.
